

**Problem 8.5**

Real Structure

1) 1° S.I. Choose  $H_d$  as the redundant.

Primary Structure

Unit Value of Redundant

Displacement in primary structure:

$$\begin{aligned}
 \Delta_{d0} &= \int \frac{mM}{EI} \\
 &= \frac{1}{EI_0} \int \left( \begin{array}{c} 1.5 \\ -1.5 \end{array} \right) \left( \begin{array}{c} 60 \\ 60 \end{array} \right) \quad (\text{segment a-e}) \\
 &+ \frac{1}{EI_0} \int \left( \begin{array}{c} 1.5 \\ -1.5 \end{array} \right) \left( \begin{array}{c} 60 \\ -3 \end{array} \right) \quad (\text{segment e-b}) \\
 &+ \frac{1}{1.5EI_0} \int \left( \begin{array}{c} 5 \\ -3 \end{array} \right) \left( \begin{array}{c} 60 \\ -1.5 \end{array} \right) \quad (\text{segment b-c}) \\
 &= \frac{1}{EI_0} \left[ \frac{1.5}{3} \times -1.5 \times 60 + \frac{1.5}{2} (-1.5 + -3) 60 \right. \\
 &\quad \left. + \frac{1}{1.5} \times \frac{5}{24} \left[ (-3)(30 \times 5^2 + 8 \times 60) + (-1.5)(30 \times 5^2 + 4(60)) \right] \right] \\
 \Delta_{d0} &= \frac{-1168.75 \text{ kN-m}^3}{EI_0} \quad (\therefore \leftarrow)
 \end{aligned}$$

Flexibility Coefficient (displ. due to unit value of redundant)

$$\begin{aligned}
 f_{d1} &= \int \frac{mM}{EI} \\
 &= \frac{1}{EI_0} \int \left( \begin{array}{c} 3 \\ -3 \end{array} \right) \left( \begin{array}{c} 3 \\ 3 \end{array} \right) \quad (\text{seg. a-b}) \\
 &+ \frac{1}{1.5EI_0} \int \left( \begin{array}{c} 5 \\ -3 \end{array} \right) \left( \begin{array}{c} 5 \\ -1.5 \end{array} \right) \quad (\text{seg b-c}) \\
 &+ \frac{1}{EI_0} \int \left( \begin{array}{c} 1.5 \\ -1.5 \end{array} \right) \left( \begin{array}{c} 1.5 \\ -1.5 \end{array} \right) \quad (\text{seg c-d}) \\
 &= \frac{1}{EI_0} \left[ \frac{3}{3} \times -3 \times -3 + \frac{1}{1.5} \times \frac{5}{6} \left[ -3(2 \times -3 + -1.5) + -1.5(-3 + 2 \times -1.5) \right] \right. \\
 &\quad \left. + \frac{1.5}{3} \times -1.5 \times -1.5 \right] \\
 &= \frac{27.625 \text{ m}^3}{EI_0}
 \end{aligned}$$

Compatibility:

$$\begin{aligned}
 0 &= \Delta_{d0} + H_d f_{d1} \\
 &= \frac{-1168.75 \text{ kN-m}^3}{EI_0} + H_d \frac{27.625 \text{ m}^3}{EI_0}
 \end{aligned}$$

Solve:

$$\underline{\underline{H_d = 42.31 \text{ kN}}} \quad (\therefore \leftarrow)$$

Superposition to find reactions & moments:

$$\begin{aligned}
 H_a &= H_{a0} - H_d h_{a1} \\
 &= 40 - 42.31 \times 1 \\
 &= -2.31 \text{ kN} \quad (\leftarrow)
 \end{aligned}$$

$$\begin{aligned}
 R_a &= R_{a0} + H_d h_{a1} \\
 &= 63 + 0.3 \times 42.31 \\
 &= 75.7 \text{ kN} \quad (\uparrow)
 \end{aligned}$$

$$\begin{aligned}
 R_d &= R_{d0} - H_d h_{d1} \\
 &= 87 - 0.3 \times 42.31 \\
 &= 74.3 \text{ kN} \quad (\uparrow)
 \end{aligned}$$

$$\begin{aligned}
 M_b &= 60 - 3 \times 42.31 \\
 &= -66.9 \text{ kN-m} \quad (\curvearrowright)
 \end{aligned}$$

$$\begin{aligned}
 M_c &= 0 - 1.5 \times 42.31 \\
 &= -63.5 \text{ kN-m} \quad (\curvearrowright)
 \end{aligned}$$
